EXAMINER

GILMAN, ALEXANDER

ART UNIT

PAPER NUMBER

2833

DATE MAILED: 06/20/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/812,432		Applicant(s) SCOTT ET AL.	
	Examiner Alexander Gilman		Art Unit 2833	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 June 2003.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15 and 18-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-15 and 18-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Art Unit: 2833

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 and 19 are rejected under 35 U.S.C. 103(e) as being unpatentable over Prochaska et al in view of Nagayama , Wei et al (US 5,747,402) and Scott, Jr et al .

With regard to claims 1-5, 14-16, Prochaska et al (US 4,427,785) disclose translucent ceramic body and a method of its manufacturing, the method comprising:

densifying a ceramic body to form substantially translucent ceramic body which includes aluminum, the densifying process including heating the ceramic body under isostatic pressure up to 2100 kg/sq.sm (col. 7, lines 10-14) at temperature 1600-1700 degrees C.(col. 7, lines 23-25).

Prochaska et al do not disclose

the ceramic body includes about 99.9% aluminum;

alumina containing 0.5 weight percent of magnesia;

contacting of the substantially translucent ceramic body with a molten inorganic flux, which includes an alkali metal borate capable of dissolving the ceramics.

Nagayama (US 5,742,123) teaches using isostatic pressure using starting material containing 99.9% aluminum (col. 27, lines 41-46).

Wei (US 5,747,402) discloses aluminum containing 0.5 weight percent of magnesia (Abstract),

Scott, Jr et al (US 4,033,743) disclose contacting of the substantially translucent ceramic body with a molten inorganic flux (col. 3, lines 31-39) which includes an alkali metal borate (col. 4, lines 30-34) capable of dissolving the ceramics.

Art Unit: 2833

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use starting material containing 99.9% aluminum and 0.5 weight percent of magnesia in the Prochaska densifying process and polish the Prochaska et al translucent ceramic body with a molten inorganic flux, as taught by Scott, Jr et al, to further increase its optical transmission.

With regard to claims 6-13, 19, Prochaska et al when modified by Nagayama, Wei (US 5,747,402), and Scott, Jr et al disclose (Scott, Jr. et al):

a molten flux bath with temperature less than 1000 degrees and oxidizing atmosphere (col. 4, lines 34-39) (claims 6-8);

coating the ceramic body and heating the ceramic body (col. 4, lines 11-19) (claim 9);

removing flux residue with an acid solution (col. 4, lines 24-26) (claim 10);

the alkali metal borate presented by $(\text{Na}_2\text{O})_n(\text{B}_2\text{O}_3)_m$ (col. 4 lines 38-48) (claims 11 and 12);

the ceramic body is an arc tube (Abstract, lines 4-10) (claims 13 and 19).

Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Prochaska et al in view of Nagayama – Wei et al (US 5,747,402) and Scott, Jr et al as applied to claim 12 above, and further in view of Wei et al (US 5,861,714).

Prochaska et al when modified by Nagayama – Wei et al (US 5,747,402) disclose all of the limitations except for the alumina containing magnesia, said magnesia at a concentration at 400-1500 ppm.

Wei (US 5,861,714) discloses aluminum containing magnesia at a concentration at 800 ppm (col.13, lines 8-22).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the Prochaska - Nagayama – Wei et al (US 5,747,402) -Scott, Jr et al aluminum with the specified magnesia concentraion, as taught by Wei (US 5,861,714), to aid in process of sintering.

Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Scott, Jr et al (US 4,033,743) in view of Prochaska et al and Nagayama – Wei et al.

Scott, Jr et al (US 4,033,743) disclose (Fig. 1) a discharge vessel (2) which defines a chamber and polished by immersing in a molten inorganic flux (col. 3, lines 31-38; col. 4, lines 10-14) ; electrodes sealed (11, 22) into the ends of the chamber, and a fill (inherently) sealed within the chamber.

Scott, Jr et al do not disclose the starting material consists of 99.9% aluminum and process of densifying aluminum by applying sufficient pressure and temperature.

Prochaska et al disclose densifying aluminum by applying sufficient pressure and temperature as applied to claim 1 above.

Nagayama and Wei et al (US 5,747,402) respectively disclose the starting material consisting of 99.9% aluminum and containing 0.5 weight percent of magnesia.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to manufacture Scott, Jr et al vessel using the technology of Prochaska and the starting material as taught by Nagayama and Wei et al (US 5,747,402), as an appropriate sintering technology for further polishing of the vessel.

Response to Arguments

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive (disqualifying the patent under para 103a) and, therefore, the finality of that action is withdrawn.

Applicant's arguments with respect to claims 1-15, 18-20 have been considered but are moot in view of the new ground(s) of rejection.

Examiner apologies for the typographical errors (Scott et al instead of proper Scott Jr. et al and Scott, Jr et al (US 4,690,727) instead of proper Scott, Jr et al (US 4,033,743)).

Art Unit: 2833

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alexander Gilman whose telephone number is (703) 305-0847. The examiner can normally be reached on Monday-Friday, 10:30 a.m. - 8:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula A. Bradley can be reached on (703) 308-2319. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7724 for regular communications and (703) 308-7722 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-4900.

Alexander Gilman
